

OVIFY

AI-Powered IVF Patient Adherence & Clinic Support Ecosystem

Keeping IVF patients on track, on time, and supported through every cycle.

A UAE-Born Innovation in Reproductive Health | Hub71 Initiate Application

Founder: Samaneh Khaleghi · Abu Dhabi, UAE · June 2026

1. Executive Summary

Ovify solves an expensive, everyday IVF problem using targeted, compliant AI.

During an IVF cycle, patients administer confusing injections at home for weeks. Between visits, clinics have zero visibility. A single missed or mis-timed dose can cancel a **cycle worth up to 55,000 AED**. Globally, **54% to 65% of patients drop out**.

Ovify bridges this gap with an AI-prioritised ecosystem.

1

The Patient Web App

Step-by-step injection visual timers, automated alarms, and an AI companion answering common questions in English/Arabic instantly. Saves hospital support lines from basic calls.

2

The Support Sync App

Keeps support companions informed with daily cues on how and when to support, synchronizing tasks to decrease the patient's emotional workload.

3

The Clinic Dashboard

Uses an AI model to analyse patient logging latency and sentiment check-ins, ranking patients dynamically by cycle-dropout risk so nurses can intervene 48 hours before an injection window is missed.

2. The Problem

IVF treatment is overwhelming, manual, and disconnected.

● Patients: High Emotional & Cognitive Burden

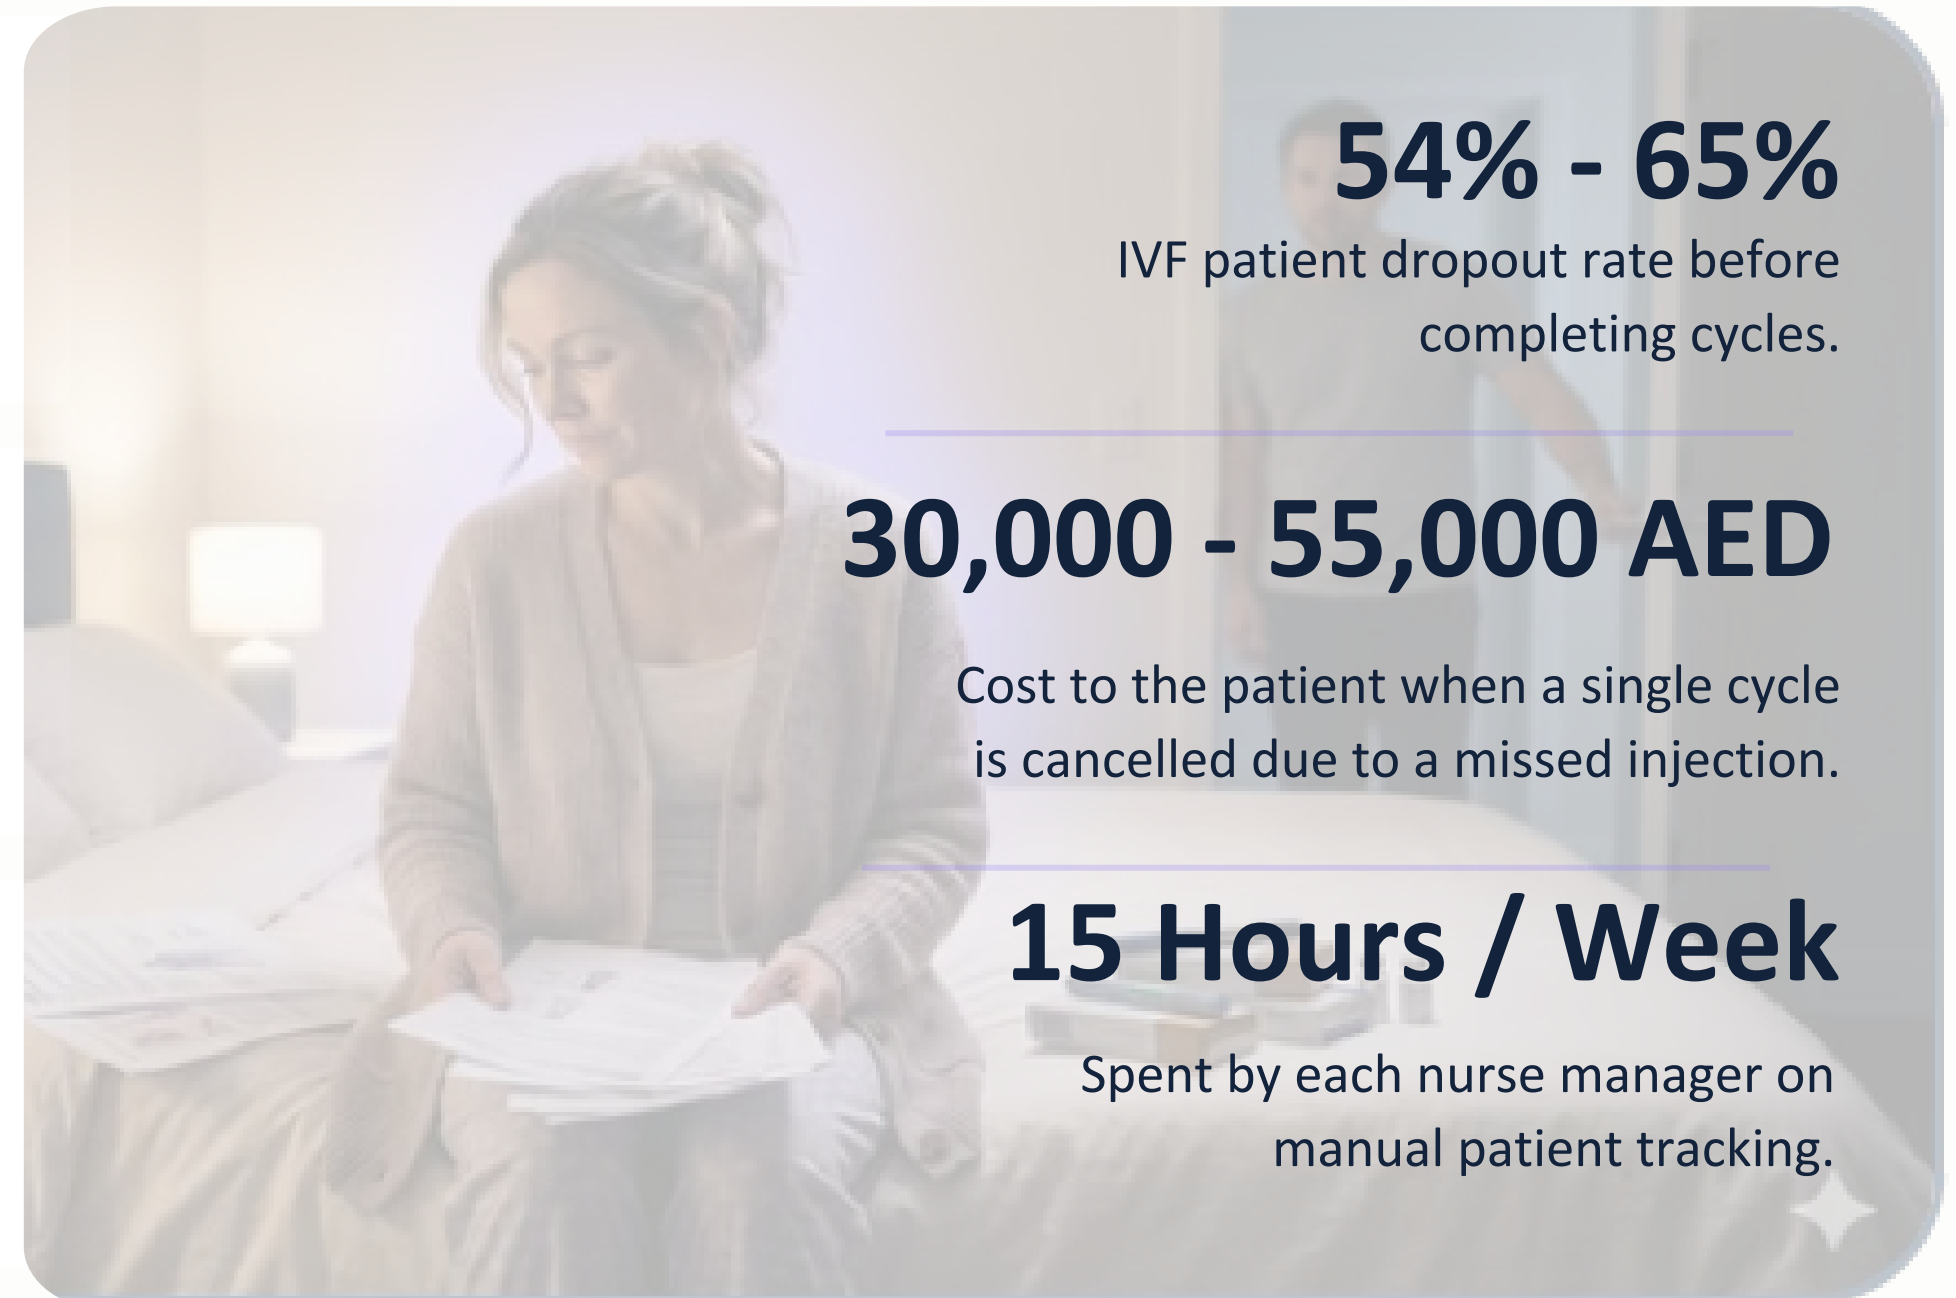

Confusing medication regimens, self-injection anxiety, and a total lack of structured real-time support between weekly clinic check-ins.

● Support: Willing but Left Out of the Loop

Support companions feel invisible and disconnected, with no guidance on how to offer physical or emotional support during critical injection windows.

● Nurses: Burned Out & Overloaded with Admin

Clinical coordinators spend up to 15 hours every week manually chasing patient compliance logs via phone calls and disorganized WhatsApp chats.

3. Market Opportunity & Growth

Unprecedented regional demand coupled with supportive regulatory changes.

1 in 6 Adults Affected Globally

WHO estimates that infertility affects 17.5% of the adult population, driving a massive increase in clinical demand.

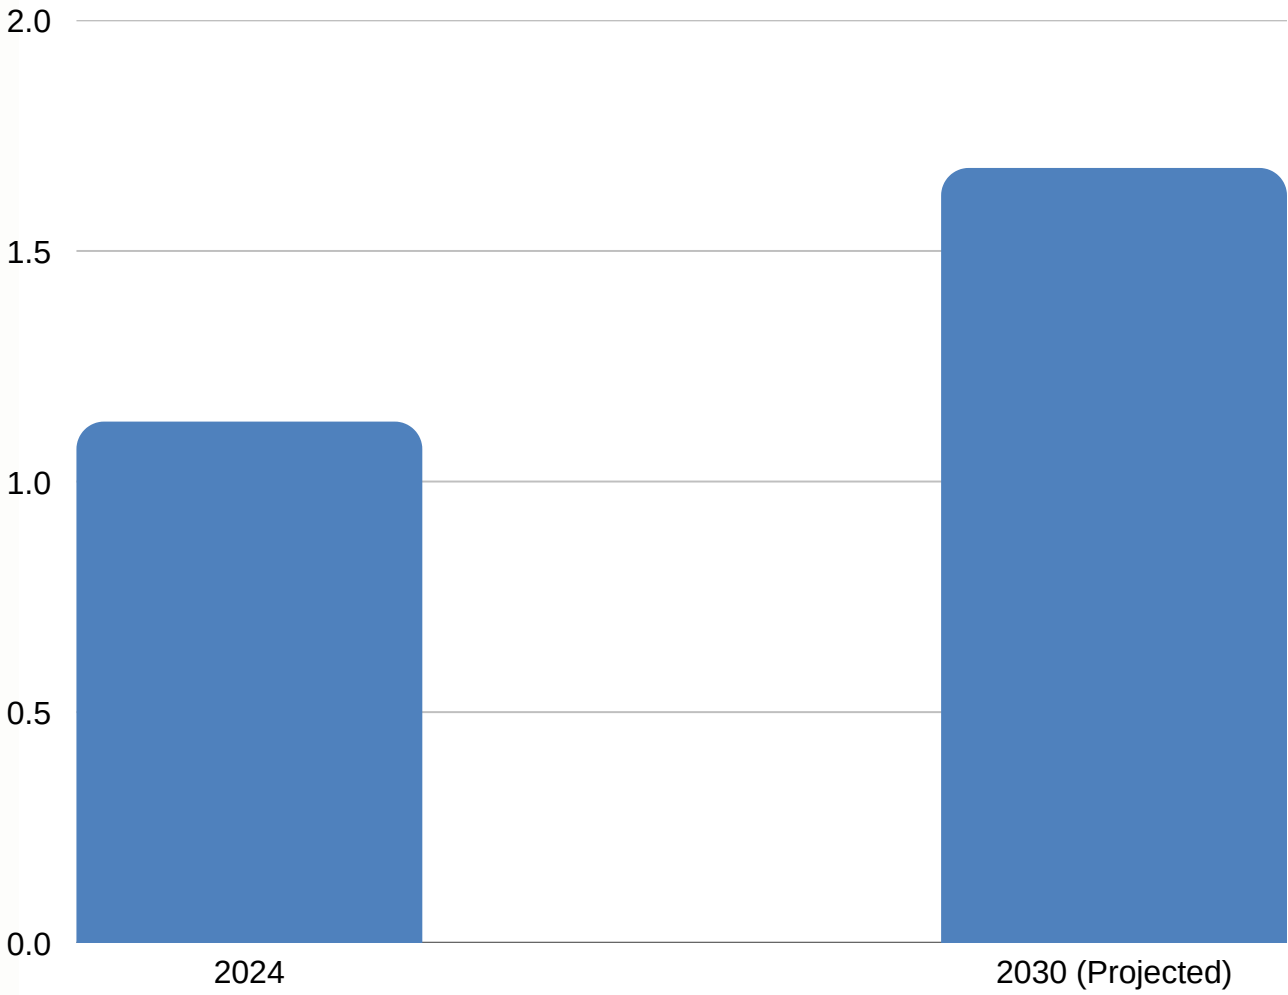

UAE: Regional IVF Hub

18,000 to 20,000 IVF cycles are performed annually in the UAE alone, valued at \$294M to \$310M. High out-of-pocket spending.

GCC Growth Trajectory

The GCC IVF market size is valued at USD 1.13B in 2024, projected to grow to USD 1.68B by 2030 (6.7% CAGR).

GCC IVF Market Size (USD Billion)

beachhead expansion: Abu Dhabi (Y1) -> Dubai (Y2) -> Saudi Arabia (Y3)

4. The Solution & Process Flow

Step 3: Change "AI Alerts Clinic" to 3.

A real-time clinical loop running on friction-free, app-store-independent PWAs.

1

AI Voice & Text Onboarding:
Nurses dictate or paste medication protocols; AI parses and builds the patient timeline in 90 seconds.

2

Instant Patient Onboarding:
Patient receives a secure WhatsApp/SMS link; installs app to homescreen instantly.

3

Support Companion Sync:
Companion is invited; calendars sync and coordination prompts align automatically.

4

Interactive Guidance:
Daily timers alert patient; step-by-step visual guides verify syringe preparation.

5

CalmSeed Companion (RAG):
Patient chats with a medical Explainer; daily check-ins monitor psychological distress.

6

Predictive Triage Engine:
Logging latencies and sentiment anomalies trigger risk ranking on the dashboard.

7

Nurse Priority Intervention:
Coordinator triages high-risk patients proactively to prevent dropouts before failures.

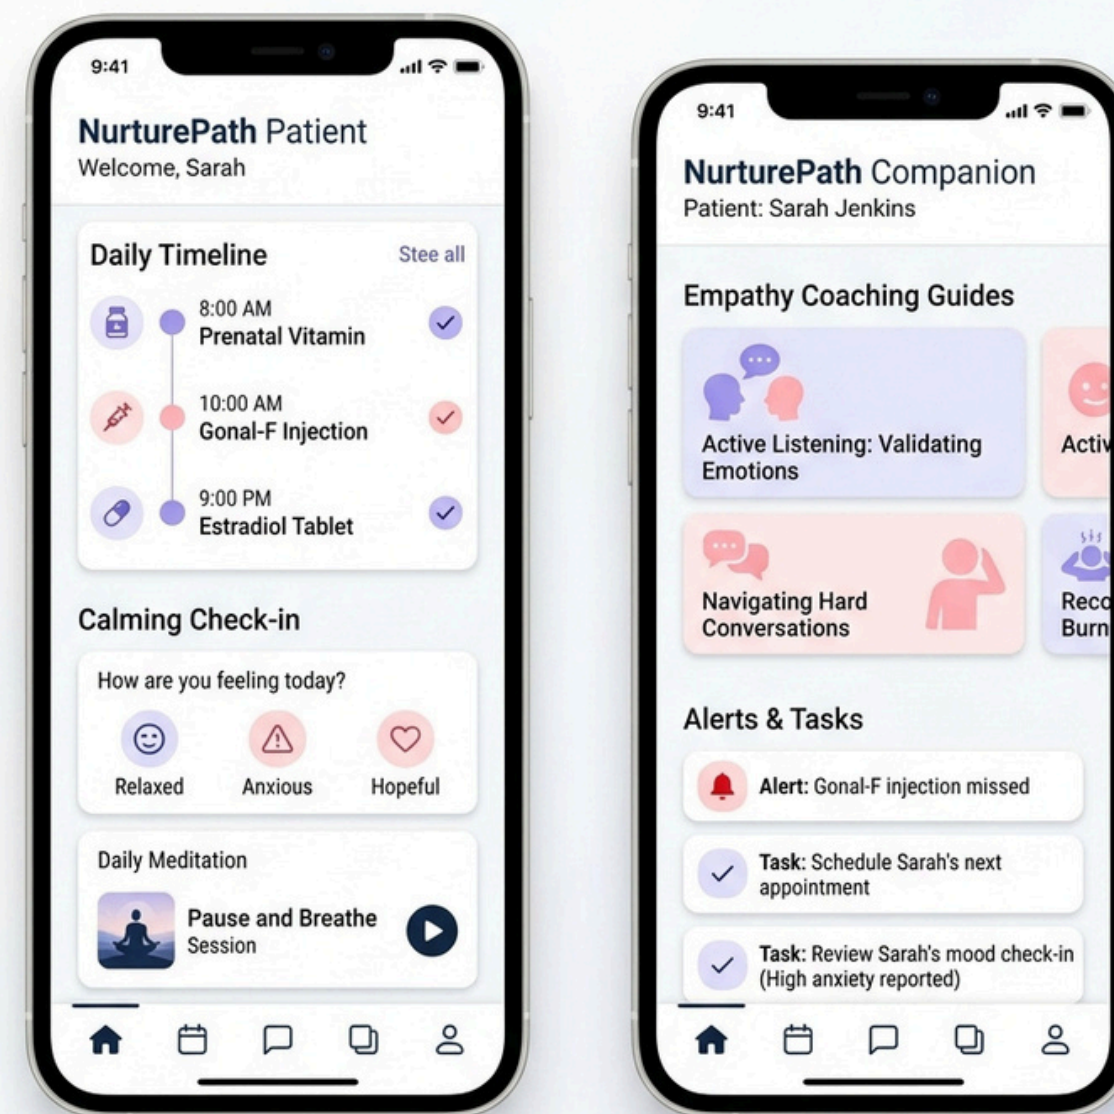

5. Patient & Support Companion Apps

Integrated, AI-powered mobile tools that turn confusing protocols into clear, guided tasks.

AI Patient & Support Features

- LLM-Driven & Tracker**
Allows nurses to dictate or paste medication protocols; AI parses audio and text to automatically build the patient daily timeline
- Interactive Guidance Engine**
Step-by-step visual timers and mixing guides that patients follow during the critical self-injection window.
- Ask-Me-Anything Explainer**
Conversational agent leveraging RAG grounded in verified clinical guidelines (ASRM/ESHRE) to answer medication and clinical questions instantly in English/Arabic.
- Support Companion Sync**
Delivers timely nudges, empathy coaching cues, and aligned calendars, reducing patient anxiety and relationship friction.

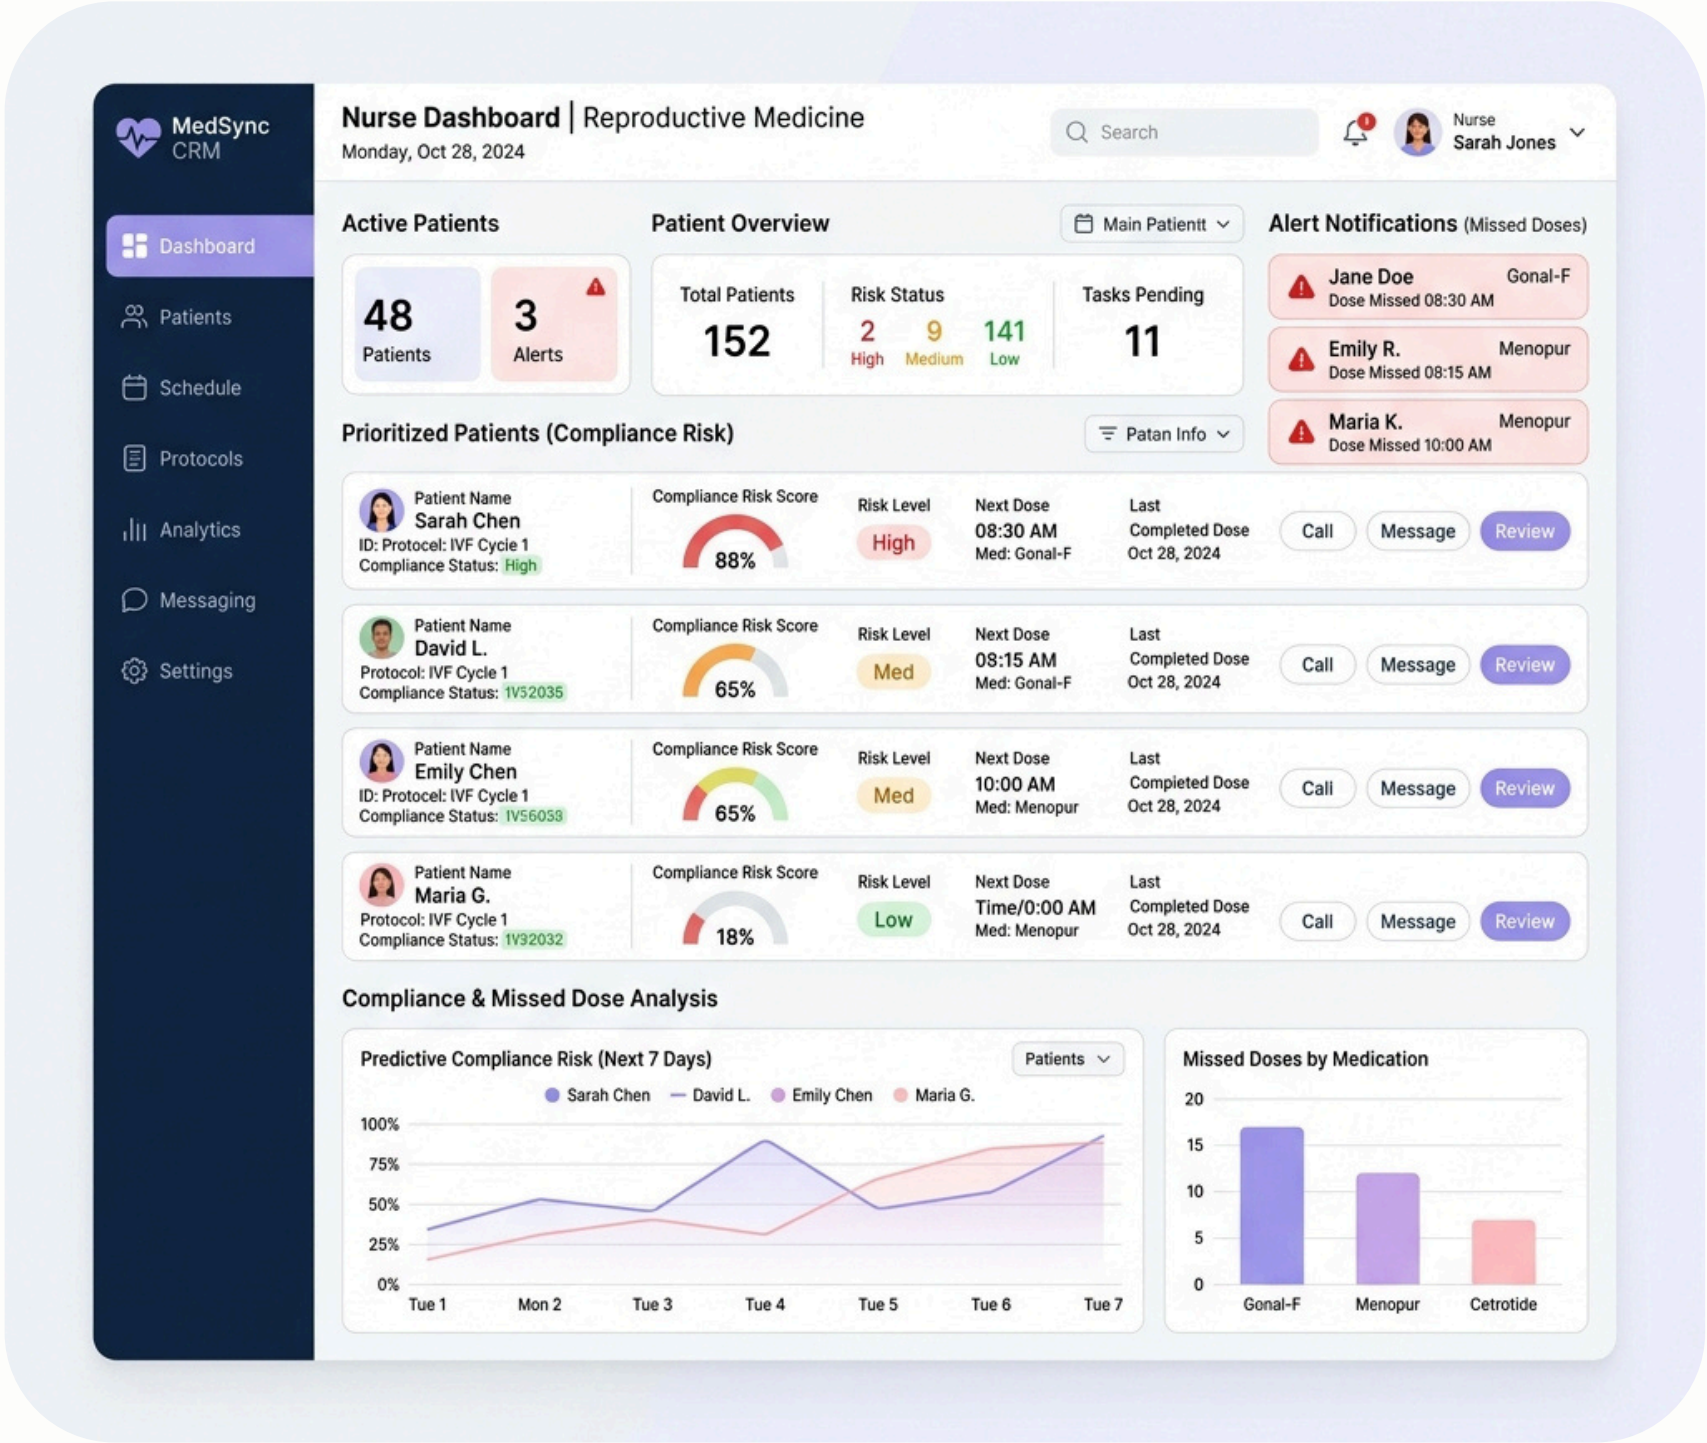

7. AI Engine & Clinic Dashboard

Machine learning that anticipates dropouts and optimizes nurse workloads.

- CalmSeed Emotional AI (NLP)**
Analyzes daily check-in logs and user text trends for semantic markers to identify warning signs of severe anxiety, highlighting patients for nurse follow-up.
- Predictive Adherence Classifier**
A supervised model trained on logging cadence trends (e.g., a patient logging Menopur 15 minutes later each day) to predict dropout risks 48 hours before compliance failure.
- Dynamic Patient Risk Vector**
Synthesizes compliance behavior, NLP sentiment logs, and cycle phase complexity (dosage, patient age) into a unified priority score.
- Nurse Priority Triage Console**
Dynamically ranks active patients based on the Risk Vector, streamlining clinic workflows and saving nurses up to 40% of administrative phone chasing.

8. Competitive Landscape

No existing competitor delivers both deep EMR integration and patient support.

Our real competitor	Paper & WhatsApp No visibility, no compliance alerts. Heavy manual workload that burns out clinical staff.
Patient only	Consumer Apps (e.g., Embie, Naula, Bonzun) Purely patient-facing tracking calendars, zero clinic dashboard or nurse compliance alerts.
Records only	Fertility EMRs (e.g., eIVF, MedITEX, BabySentry) Records and scheduling platforms with very basic, rarely-used patient portals.
Generic portals	Hospital / HIS Portals (e.g., Epic, Cerner, Malaffi) Generic, non-specialized health portals that lack IVF-specific workflows.

Ovify Moat & Defensibility

- GCC-Specific Localisation**
Arabic-first localized content, WhatsApp notifications, PDPL-compliance, and direct integration with Abu Dhabi's Malaffi exchange.
- First-Mover Clinic Lock-in**
Free clinical pilots secure early clinic partnerships, integration with EMR systems, and a reference system that is hard to replace.
- AI Adherence Data Flywheel**
Unlike legacy EMR databases, Ovify's closed-loop system actively feeds real-time patient adherence and sentiment data back into our ML model, compounding accuracy over time and creating a defensible medical data moat."

"Traditional systems are passive record repositories. Ovify is a predictive adherence engine that dynamically prevents dropout failures."

9. Monetization Strategy

A simple annual software licence, billed upfront, generating over 90% gross margin.

Starter Platform	Growth Platform	Scale / Enterprise
55,000 AED	99,000 AED	249,000 AED
per year	per year	per site / year
Up to 150 cycles (~370 AED / cycle)	Up to 500 cycles (~198 AED / cycle)	500+ cycles (~166 - 249 AED / cycle)
9,000 AED setup fee	18,000 AED setup fee	35,000 AED setup fee
Best for boutique, single-site fertility clinics.	Optimized for active regional mid-size centres.	For large multi-site clinical hospital chains.

“Immediate Clinic ROI: Preventing just two canceled cycles per year pays for the entire annual software subscription.”

Future Expansion Revenue Models (from Year 2)

Engine 2: Co-Branded Cycle Bundle

Fold Ovify into standard clinic IVF cycles. Clinic charges patients 350 AED, pays Ovify 150 AED, and keeps 200 AED margin (turns software into a profit center for clinics).

Engine 3: Wellness & Partner Network

Earn referral commission fees on opt-in fertility-friendly wellness sessions (yoga, nutritionists) and payment/financing referrals (e.g. Bank Loans).

10. Execution Roadmap & Financials

A phased rollout plan designed to prove clinical value, then scale.

1

Months 0 - 4

Phase 1: Build MVP

Complete Patient app & AI nurse dashboard build.

2

Months 4 - 6

Phase 2: Live Pilots

Free pilots with 3 Abu Dhabi clinics; onboard 150 patients.

3

Months 7 - 9

Phase 3: Prove Value

Measure nurse hours saved and dropout rates prevented.

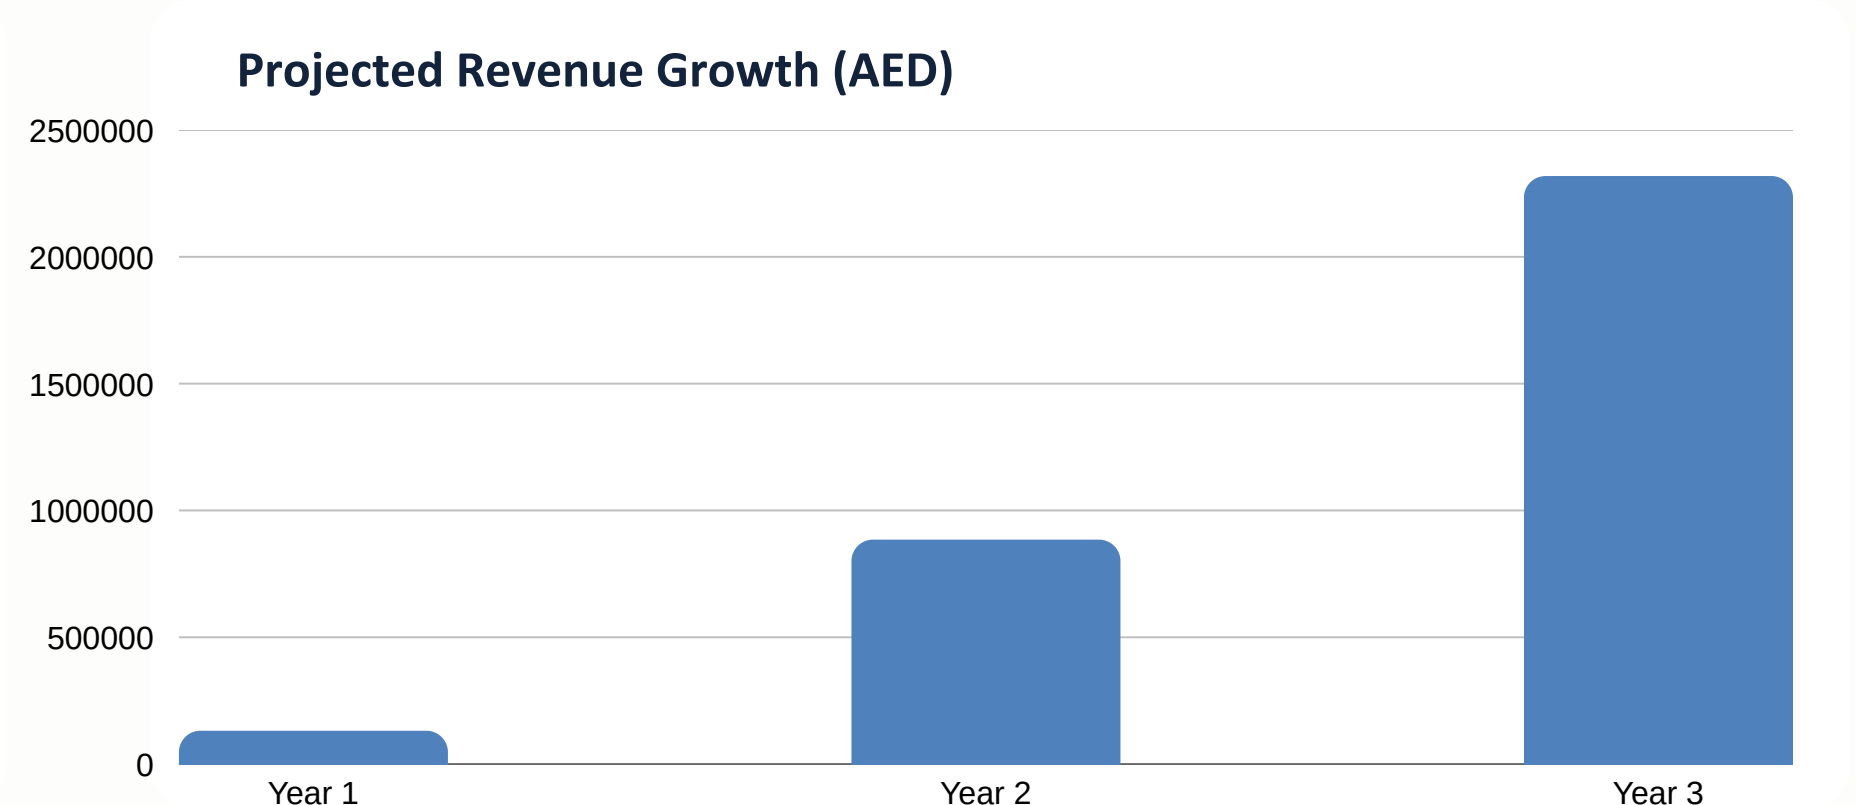

4

Months 10 - 12

Phase 4: Convert & Paid

Convert 2 out of 3 pilots into paid annual contracts.

Three-Year Projections (Bottom-Up Model)			
Metric	Year 1	Year 2	Year 3
Paying Clinics	2	6	13
Cycles Processed	400	2,200	5,500
Total Revenue	131.5K AED	885K AED	2.32M AED
Operating Costs	511.5K AED	809.6K AED	1.20M AED
Net Profit / (Loss)	(380K AED)	+75.4K AED	+1.12M AED

11. The Team

Lived IVF patient experience combined with enterprise cloud architecture.

Samaneh Khaleghi

Founder & CEO | Ovify

- Lived Experience:
Went through four personal IVF treatment cycles, providing a deep, personal understanding of patient challenges.
- Technical Expertise:
15+ years in Enterprise Cloud Architecture, Banking Infrastructure Transformation, and Cloud Systems Delivery.

2x Senior Developers (Full-Stack & Mobile) - To be hired

Offshore resources. Build AI platform backend, database APIs, AI engine, and PWA companion apps.

UI / UX Experience Designer - To be hired

Offshore resource. Focuses on the patient app and clinical coordinator dashboard: clean, calm, and simple layout.

Medical & Clinical Advisor - To be hired

Informal advising regional IVF doctor. Validates clinical credibility, protocol structures, and coordinates pilot introductions.

Sales & Commercial - To be hired

Planned Year 2 hire. Key commercial resource responsible for pilot-to-paid conversions and GCC clinical expansions.

12. Why Hub71 & Abu Dhabi?

The fastest path to build a regional, regulated health-technology company.

1 Strategic Introductions

Direct Clinical Pilot Access

Hub71's network and healthcare partnerships (like Daman, SEHA, Cleveland Clinic) help us open the hardest door: direct, credible access to clinical pilot sites.

2 Regulatory Alignment

Aligned with Department of Health

Abu Dhabi's DoH vision, the Malaffi unified health information exchange, and ADGM data regulations align perfectly with Ovify. Compliance is built in from day one.

3 Cost Optimization

Runway Capital Efficiency

Subsidized office space, housing support, and licensing incentives stretch our capital runway, accelerating our path to profitability.

"Abu Dhabi provides the network, the clinical integration, and the regulation to transform an unsolved medical problem into a global benchmark."

13. Funding Ask

Seed capital request to achieve a revenue-ready MVP and paid conversions.

The Seed Round

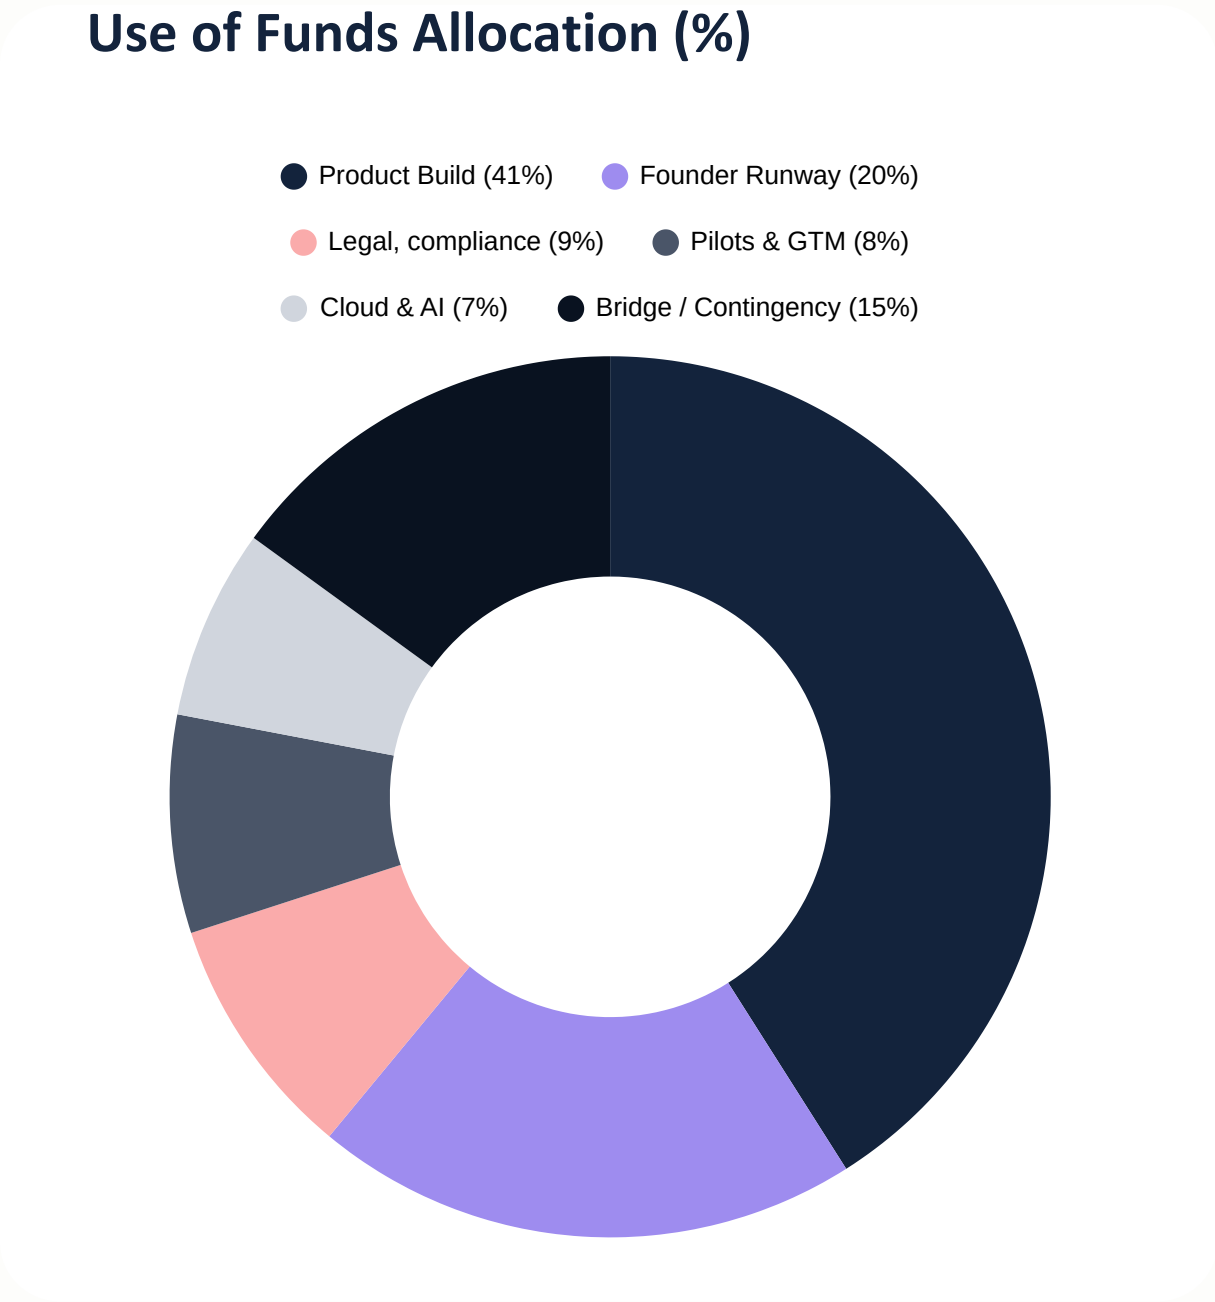

500,000 AED

Equivalent to \$136,000 USD

Runway Timeline

12 Months (to operational profitability)

- ✓ Revenue-ready MVP build
- ✓ First 3 Abu Dhabi pilots live
- ✓ Initial paid conversions

Use of Funds Table

Product Build	205k AED
Founder Runway	100k AED
Legal & Setup	45k AED
Pilots & GTM	40k AED
Cloud & AI APIs	35k AED
Bridge Buffer	75k AED

OVIFY

"Our vision is to build the regional standard for digital IVF patient adherence, making the UAE the global benchmark for how patients are supported through their fertility journey."

Let's build it from Abu Dhabi.
